

Stakeholder meeting - Christine(supervisor)
1:15-1:45 on Zoom - Myhal 6th floor nook

Questions We have:

- How does the intake process work at the start of the day? Do parents sign kids in? Would adding an extra bottleneck here cause too many additional problems?
- How do you currently prepare the wristbands for the kids? Rip off sheet and store in bag/hold? Are they prelabeled or do you use a sticker?
- What is the current system of checking if kids have wristbands? Checklist? If they have something else, ex. Shirt?

Q: general role/info about the community and Christine

A:

- She's been a supervisor for 8 years, worked there 29
- Work a lot with staff – plans and orders bracelets and t-shirts
- Want to have the bracelets - great id, esp s they get older
- Time consuming
- Template of what they want it to say
- Cant undo them - once their on there on
 - Some kids leave on for multiple field trips in a week (3)
 - Cant adjust
 - Go through a lot of them
 - 90 school age kids Not always all there for field trips
- Delegate tasks - forms, bracelets, sunscreen
- Deal with sensory needs
- 10 seconds
- Always mess up on at least one

Q: process during kids coming in?

A:

- No set time
 - 15 minutes before
 - Up to 2 hours before - whenever works with family
- Staff to attendance, parents say good morning so staff can deal t
In summertime 0 outside in schoolyard
No bottleneck unless winter break

Can get busy quickly
Anticipate how many show
Often surprised

Q:

A:

- Fit is the most difficult aspect
- Too big slips
- Some too tight
- Sensory experience for each kid
- Demo to staff
- large , have plastic snap, can make smaller or larger
- Might be other companies but cost is a factor

Q: Concerns about the kids removing the wristband during the field trip?

A:

- Not often but yes
- Children want to take it off asap

Q: Physical discomfort?

A:

- Not really
- Standard one size fit all, large
- Have to cut off excess
- Don't like if you fold over

Q: Summer time when kids running outside, any challenges to track children from everywhere?

A:

- Someone uses a louder voice - if you don't have one come see me
- Some kids ignore
- Staff usually carry a few extras
- Earlier is easier - less kids and then trickle until busy
-

Q: Changing the wristband or the process?

A:

- Possibly
- Has to be able to get wet - no fabric
- Easy to get on and off
 - No tie
 - Has to stay on
- Band would save time

Q: How do you currently prepare the wristbands for the kids? Rip off sheet and store in bag/hold? Are they prelabeled or do you use a sticker? How long to put the wristband on?

A:

- Boxes of 5000 1000 easy to take off
- divide in baggies for each class
- No amazon (using a company from Quebec)
- not long time
- Already organized strips

Q: How much time delay from putting wristbands on

A:

- Because of the positioning, cant open and close lead to an extra few seconds
- 20 seconds or so
- Builds up when there a lot of kids
- Tried to get parents to put on ahead of time but didn't work - something staff need to manage

Q: What are things that the staffs assume the kids cannot do due to some safety factors?

A:

- Children done have the fine motor skills to put on
- Lining up the holes
- Only have one hand to wrap around
- Other kids help? Wrong size
- Need an adult to ensure on and closed and comfortable
- Like the concept of the bracelet - safe, fits / something small if favourable than something loose and hanging

Q: filling out appearance forms Take more time or not

A:

- Does take longer - 1 minute a child

- Hair and eye colour wont change - prepopulated
- If the staff can't get to it - leave to bus boarding if not done in time

Q: age groups to the field trips

A:

- Most are 4-11/10
- 2 and a half to 5 go once in july/aug (less than 5 times a year)
- Smaller ratios (staff to student?)

Q: automatically putting the wristband on, will the kids be scary?

A:

- If open concept device is better
- Kids like machines and auto pencil sharpeners
- Build interest
- Too closed in (can't see fingers) more hesitant
- Only focus on wrists
- "Wanna use the broom" and do things for themselves

Q: 15 minutes - is it a good representation/standard of time? Is this the community's goal?

A:

- Realistic for 1 staff member for all kids if everything goes as planned
- Not everyone arrives at same time... especially last second kids
- No specific goal - don't go until everyone has what they need

Q: prefer a stationary thing? Machine?

A:

- Staff go to kids
- If it makes children self sufficient - consider size (dont want full table, smaller than printer)
- Cautions of heat and sounds

Q: any portability requirements?

A:

- If staff have to carry a device why don't they just do it - time is not freed
- Safe device that they don't have to worry so staff doesn't have to monitor
- Cant always add device to start because every room is different

- Easy to access is important
- Can encourage parents to assist child - not at home but here
- While mom hangs up bag go and put thing on
