

Rescoping (Scoping Up)

- We decided to include the general Balmy Beach Daycare Community in the application process, rather than just staff
- We included solutions that were a new wristband, rather than an applicator of the original ones.

Reframing

Need Statement

Change	Reason
Replaced “day care staff” with “Balmy Beach Community Daycare”	We want to be more inclusive. The children are also greatly affected by any design and their stakeholder needs should be prioritized as a vulnerable community. Additionally, this change allows the possibility that the adults dropping the children off could aid in the application process.
Replace "Consistent" with “Reliable”	We interpret consistent as being the same every use. In order to prioritize the compatibility of the device for every child from 2.5-12 years old, we want something that can adapt to each wrist size and work best with each child's sensory needs. We think a sustainable and effective change in their lived experience should be reliable. This also may help with the introduction of something new to the kids, change is already scary but if they can't trust the device it won't fit their needs.
Remove “Preperation”	Not the priority so doesn't need to be in the need
Replace "Field Trip” with “Identification”	The primary purpose of these wristbands is identification. They must contain the name and phone number to be “function” so it should be in the need.

Remove “While maintaining active supervision in a busy, unpredictable arrival window”	We see this as context that's not necessary in the need
---	---

Goal 1: Efficiency

- New Objective

Goal 2: Reliability

- Modified objective 2.1: the original one was “100 % elimination of repeated verification process”, the new one is “verification process for each kid is less than 5 seconds”.
- Add requirement for durability over one week of wear

Goal 3: Usability

- Change from Ergonomics to Usability

Goal 4: Safety

- Include everyone
- New Requirement (4.3: Coverings of mechanical points and other hazards must withstand 66.8N of tension and 133.4N of compression force).
- Split objective 3 into for applied to wrist and by wrist
- Justify 10 N – change
