

Team Position

Purpose

As observers and researchers, our team is committed to understanding our relationship to the community we are exploring. This document outlines our values, community connections, and awareness of potential biases so we can manage them thoughtfully and consistently throughout our research process.

Team Values

Our shared team values are: Adventure · Responsibility · Equity, Diversity & Inclusion · Hands-On Experiences

Relationship to the Community

- Family experience with home daycare settings
- Montessori school background
- Participated in school field trips
- Direct experience working with children
- Experience with wristband policies at the pool

Positionality: Biases, Interests & Management Strategies

Potential Biases	Our Interests	How We Are Managing Them
• We are not children — we lack current lived experience of childhood • Tendency to favour engineering/physical solutions over systemic or digital ones • Less inclined toward software/coding approaches • Assumptions shaped by specific field trip demographics	• Making educational experiences more accessible • Designing with children's perspectives in mind (size, strength, interests) • Supporting inclusive and collaborative environments	• Reaching out to stakeholders for broader input • Including family perspectives in research • Asking questions rather than assuming • Prioritizing children's needs throughout the research process

Key Assumptions to Revisit

Assumption	How We Are Revisiting It
Children don't like to listen and have a lot of energy	We will test this against direct observation and stakeholder input
Engineering/physical solutions are always preferable	We will remain open to systemic, digital, and hybrid approaches
Our family and school experiences are broadly representative	We will actively seek diverse community perspectives

Note: Our assumptions are not inherently good or bad. What matters is that we remain aware of them and actively manage their influence on our research.
